

SPECIALISTS IN THE DESIGN
AND MANUFACTURE OF
COMMERCIAL VEHICLE LIFTING
SOLUTIONS

Autolift, the UK's best commercial vehicle lifting equipment manufacturer.

Autolift has now been established for 25 years and have reached their quarter centenary of trading in 2024. Over that time, we have built a well-respected reputation within the vehicle lift industry with our name being synonymous with high quality, efficient performance and reliability. We manufacture a range of inspection pit jacks, transmission jacks, jacking beams & component parts at our UK premises. 2024 was a noteworthy year for Autolift because of the release of the new design of our flagship 20T Twin Ram Pit Jack and us moving into new larger premises.

Our Journey: 25 Years of Innovation

From our humble beginnings to becoming an industry leader, Autolift has always pushed boundaries. It began in 1999 in a small workshop before moving into a dual-occupied building in Evenwood in County Durham. In 2009, Neil Smith acquired the company and relocated it to the Midlands, setting the stage for further growth. In 2021, his son David and daughter Emma took over, driving the company forward with fresh ideas and vision. Over the years, we have delivered various lifting solutions that are efficient, safe & cost effective. This milestone is a testament to our commitment to customer satisfaction through offering high performance equipment at affordable prices without compromising on quality.

Introducing the All-New Autolift Pit Jack Engineered for power, versatility, and durability, our new Adjustable Twin Ram Air Operated Pit Jack is designed for seamless operation and enhanced flexibility. It's the perfect addition to any workshop looking for reliability and ease of use.

Key Features

- High-load capacity with advanced safety features (13, 20 & 30 Tonne lifting capacity)
- Latest upgrades in seal technology to increase performance and longevity.
- New sleek & ergonomic design
- Effortless operation for increased productivity
- Built to last with top-quality materials & machined components

Moving Forward: Our New Premises

As we step into the future, we also recently moved into a brand-new facility that will enable us to better serve our customers. This larger, more advanced space will enhance our production potential, and allow us to continue innovating for years to come. The new premises, combined with our highly trained and experienced staff, and new MRP software, will allow us to develop further and reduce production lead times through a more integrated inventory management and production system.

Autolift specialises in a niche range of high-quality lifting solutions designed specifically for the commercial vehicle industry, with our jacks being perfectly suited for workshops maintaining HGV's, Trucks, PSV vehicles and other heavy-duty equipment.

We offer a wide range of lifting capacities—13, 15, 20, 30, and 40 tonnes—allowing customers to choose the ideal jack for their specific needs. To ensure maximum flexibility, we offer both twin-ram and single-ram models, with a variety of lifting strokes and accessories. And for those unique challenges, we can design and manufacture bespoke parts to meet specialised job requirements.

Autolift has built long-standing relationships with multiple trusted distributors across the

UK and Ireland, ensuring our lifting equipment is readily available to workshops nationwide. Our commitment to excellence, expertise, and customer support has made us a preferred partner for distributors who share our dedication to providing exceptional lifting solutions.

By working closely with our network of distributors, we ensure that customers receive expert advice, fast delivery, and ongoing support no matter where they are. These strong partnerships allow us to respond

quickly to industry demands, keeping workshops equipped with the latest innovations in commercial vehicle lifting.

We offer competitive pricing, reliable stock availability, and comprehensive product support, making Autolift a valuable brand to represent in the commercial vehicle sector. Through these relationships, we continue to expand our reach, helping more workshops operate efficiently and with confidence.

Autolift's reputation for quality, safety, and consistency has earned us a global customer base, with our jacks being used in workshops across the UK, Europe, and beyond.

From New Zealand to India, the USA to the Middle East, and everywhere in between, our lifting solutions are helping commercial vehicle workshops operate more safely and efficiently. Whether in bustling urban service centres or remote fleet maintenance facilities, Autolift pit jacks continue to meet

the demanding needs of workshop operators around the world.

This international presence is a testament to our commitment to excellence, ensuring that wherever our products are used, they deliver exceptional performance, durability, and safety—no matter the location or conditions.

Engineered for Safety, Designed for You

At Autolift, safety isn't just a feature—it's at the core of everything we do. For 25 years, we've been committed to designing pit jacks that put the safety and well-being of our users first. We understand that in a demanding workshop environment, reliability and security are essential. That's why every Autolift pit jack is built with multiple layers of

protection to ensure a safer, smoother, and more efficient operation every time.

Built-In Safety Features

Every Autolift pit jack comes with a triple layer of safety included as standard, giving you peace of mind with every lift:

- 1. Safety Lowering Valve** – Providing controlled, smooth descent for ultimate operator confidence.
- 2. Hose Anti-Burst Valve** – A built-in safeguard in each ram, preventing sudden drops in the rare event of a hose failure.
- 3. Ram Lock-Off Handles** – Allowing for individual ram operation and securing the load with ease. These features ensure that every lift is **predictable, controlled**, and most importantly, **safe** for the user.

Security Struts – Simple, Efficient & Safe

In addition to our standard safety features, we offer the exclusive Autolift Security Strut System as an optional extra—a smarter, more user-friendly alternative to traditional "screw lock threaded rams" used by other manufacturers. Designed for ease of use and minimal maintenance, our Security Struts provide enhanced safety without the hassle of threaded ram-related issues.

Why Choose Autolift's Security Struts?

- **Faster & Easier to Use** – Pins insert and remove quickly, keeping your workflow efficient. No need to spend excessive time winding up/down threaded rams.
- **Sealed for Durability** – No water, rust, or debris can enter the unit, eliminating frequent maintenance and costly downtime.
- **No Threads, No Problems** – No risk of blocked or damaged threads, ensuring the safety system always works when you need it.

Our Security Struts can be retrofitted on-site with minimal disruption, making them a perfect upgrade for our New Adjustable Pit Jack.

Putting Users First

We know that when you're working in a fast-paced workshop, the safety of staff and customers is non-negotiable. That's why every Autolift pit jack is designed to protect you, reducing risks while maximizing efficiency. Whether you're lifting a light-duty vehicle or heavy commercial equipment, you can trust Autolift to deliver safety, strength, and reliability—every time.

Because at Autolift, we don't just build pit jacks.

We build confidence.

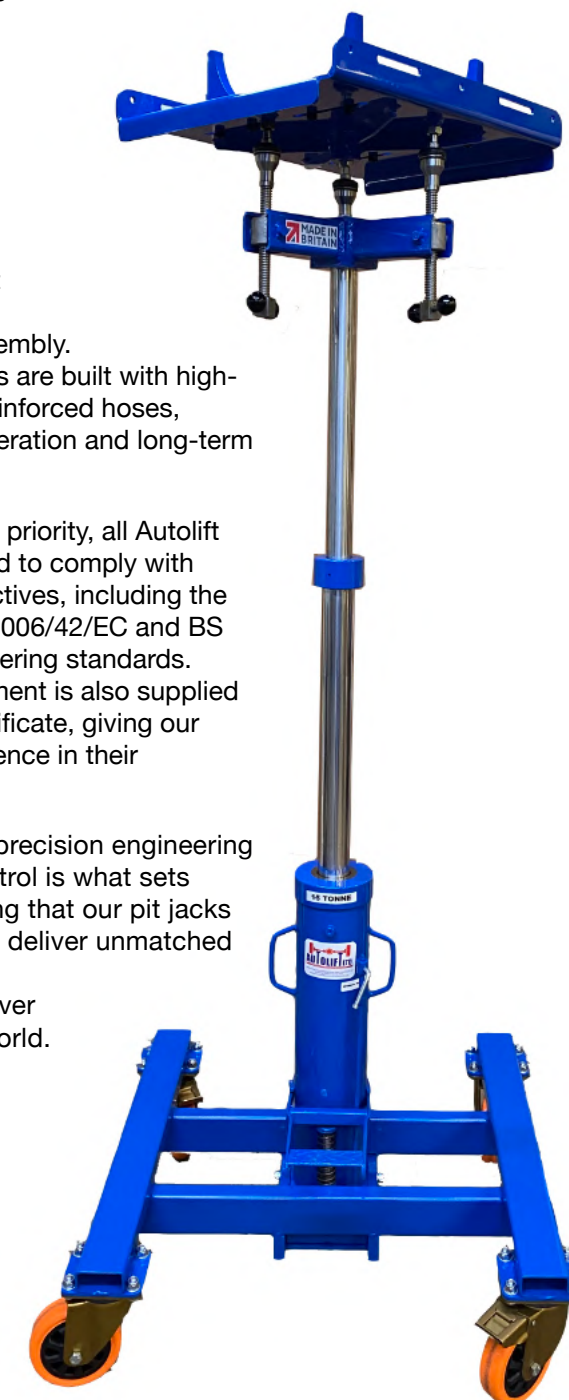

At Autolift, every component is crafted with precision engineering and unwavering attention to detail to our own designs to ensure our lifting equipment meets the highest standards of safety, durability, and performance. We work with a selection of trusted and thoroughly vetted engineering companies who use state-of-the-art manufacturing techniques and machines to produce our expertly designed component parts.

We use high-grade materials, including heavy-duty steel, to withstand the intense demands of lifting HGVs, trucks, and PSV vehicles day after day. Every weld, seal, and machined part is meticulously inspected to ensure it meets strict quality standards before assembly. Our hydraulic systems are built with high-pressure seals and reinforced hoses, ensuring leak-free operation and long-term reliability.

Because safety is our priority, all Autolift products are designed to comply with European Union Directives, including the Machinery Directive 2006/42/EC and BS EN 1494:2001 engineering standards. Every piece of equipment is also supplied with a Load Test Certificate, giving our customers full confidence in their investment.

This commitment to precision engineering and strict quality control is what sets Autolift apart, ensuring that our pit jacks and lifting equipment deliver unmatched reliability, safety, and performance—wherever they're used in the world.

To support our expanding global reach, we offer competitive distributor rates, providing partners with a strong commercial advantage while ensuring more workshops around the world have access to Autolift's industry-leading equipment.

Comprehensive After-Sales Support – Keeping Your Workshop Running

At Autolift, our relationship with customers doesn't end at the sale—we're committed to keeping your lifting equipment performing at its best all year round. We know that in a fast-paced workshop, unexpected downtime can be costly, which is why we provide a full range of after-sales services to keep everything operating smoothly.

Parts Always in Stock for Minimal Downtime

We keep a full inventory of spare parts to ensure quick replacements and minimal disruptions. Whether you need replacement components or routine wear-and-tear items, our stock availability means you won't be left waiting, helping your workshop stay productive and efficient.

Expert Servicing & Support

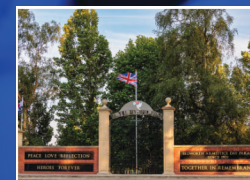

To help extend the **lifespan and performance** of your Autolift equipment, we offer:

- **Annual servicing** – Conducted either directly by our team or through a **network of trained and authorised third-party engineers**.
- **Technical assistance** – Our experts are available to help with **troubleshooting and operational guidance**.
- **Best practice advice** – Helping you get the most out of your equipment for **years to come**.

A Partner You Can Count On

Whether you are a Distributor or a Direct customer - When you invest in Autolift, you gain more than just high-quality lifting equipment, you get dedicated support and ongoing service to keep your workshop running smoothly. With quick response times, expert advice, and proactive maintenance solutions, we ensure your equipment remains durable, efficient, and always ready for the job at hand.
